Python MongoDB Drop Collection

[< Previous](#)[Next >](#)

Delete Collection

You can delete a table, or collection as it is called in MongoDB, by using the `drop()` method.

Example

Delete the "customers" collection:

```
import pymongo

myclient = pymongo.MongoClient("mongodb://localhost:27017/")
mydb = myclient["mydatabase"]
mycol = mydb["customers"]

mycol.drop()
```

[Run example »](#)

The `drop()` method returns true if the collection was dropped successfully, and false if the collection does not exist.
