Python MongoDB Sort

Sort the Result

Use the `sort()` method to sort the result in ascending or descending order.

The `sort()` method takes one parameter for "fieldname" and one parameter for "direction" (ascending is the default direction).

Example

Sort the result alphabetically by name:

```python
import pymongo

myclient = pymongo.MongoClient("mongodb://localhost:27017/")
mydb = myclient["mydatabase"]
mycol = mydb["customers"]

mydoc = mycol.find().sort("name")

for x in mydoc:
  print(x)
```

Run example »

Sort Descending

Use the value -1 as the second parameter to sort descending.

```
sort("name", 1) #ascending
sort("name", -1) #descending
```
Example

Sort the result reverse alphabetically by name:

```python
import pymongo

myclient = pymongo.MongoClient("mongodb://localhost:27017/")
mydb = myclient["mydatabase"]
mycol = mydb["customers"]

mydoc = mycol.find().sort("name", -1)

for x in mydoc:
  print(x)
```
